

Current Transducer IT 700-S ULTRASTAB

 $I_{\rm PM} = 700 \, {\rm A}$

For ultra-high precision measurement of current: DC, AC, pulsed..., with galvanic separation between primary and secondary.

Features

- Closed loop (compensated) current transducer using an extremely accurate zero flux detector
- Electrostatic shield between primary and secondary circuit
- 9-pin D-Sub male secondary connector
- Status signal to indicate the transducer state
- LED indicator confirms normal operation.

Advantages

- · Very high accuracy
- Excellent linearity
- · Extremely low temperature drift
- Wide frequency bandwidth
- · High immunity to external fields
- · No insertion losses
- Low noise on output signal
- Low noise feedback to primary conductor.

Applications

- Feed back element in high performance gradient amplifiers
- · Feedback element in high-precision, high-stability power supplies
- Calibration unit
- Energy measurement
- · Medical equipment.

Standards

- EN 61000-6-2: 2005
- EN 61000-6-3: 2007
- EN 61010-1: 2010
- EN 61000-3-2: 2006
- EN 61000-3-3: 1995 + A1: 2001 + A2: 2005.

Application Domains

- Industrial
- Laboratory
- Medical.

N° 88.36.54.000.0 Page 1/7

Insulation coordination

Parameter	Symbol	Unit	Value	Comment
Rated insulation rms voltage, basic insulation	$U_{\scriptscriptstyle m b}$	V	1600	IEC 61010-1 conditions - over voltage cat III - pollution degree 2
Rated insulation rms voltage, reinforced insulation	$U_{\scriptscriptstyle m b}$	V	300	IEC 61010-1 conditions - over voltage cat III - pollution degree 2
Rated insulation rms voltage, basic insulation	$U_{\scriptscriptstyle m b}$	V	1000	EN 50178 conditions - over voltage cat III - pollution degree 2
Rated insulation rms voltage, reinforced insulation	$U_{\scriptscriptstyle m b}$	V	600	EN 50178 conditions - over voltage cat III - pollution degree 2
	U _d	kV	4.6	Between primary and secondary + shield
Rms voltage for AC insulation test, 50/60 Hz, 1 min		V DC	200	Between secondary and shield
		V DC	500	Between secondary and status output
Impulse withstand voltage 1.2/50 µs	\hat{U}_{w}	kV	8.5	
Clearance (pri sec.)	d _{CI}	mm	9	Shortest distance through air
Creepage distance (pri sec.)	d _{Cp}	mm	9	Shortest path along device body
Comparative tracking index	CTI	V	600	

If insulated cable is used for the primary circuit, the voltage category could be improved with the following table (for single insulation) (IEC 61010-1 standard):

Cable insulated (primary) Category

 HAR03
 1750 V CAT III

 HAR05
 1850 V CAT III

 HAR07
 1950 V CAT III

Environmental and mechanical characteristics

Parameter	Symbol	Unit	Min	Тур	Max	Comment
Ambient operating temperature	T_{A}	°C	10		50	
Ambient storage temperature	$T_{\rm s}$	°C	-20		85

Sensitivity to DC external magnetic field ²⁾		ppm		5		700 A in disturbance bar @ 200 mm from bar to case
Sensitivity to AC external magnetic field ²⁾		ppm		10		495 A rms 50 Hz in disturbance bar @ 200 mm from bar to case

Notes:

¹⁾ Single pulse only, not AC. The transducer may require a few seconds to return to normal operation when autoreset system is running.

 $^{^{\}rm 2)}$ All ppm figures refer to full-scale which corresponds to a secondary current ($I_{\rm S}$) of 0.4 A.

Overload protection - Electrical specification - Status

The overload occurs when the primary current I_p exceeds a trip level such that the fluxgate detector becomes completely saturated and, consequently, the transducer will switch from normal operation to overload mode.

This trip level is guaranteed to be greater than 110 % of $I_{PN\,DC}$ and its actual value depends on operating conditions such as temperature and measuring resistance.

When this happens, the transducer will automatically begin to sweep in order to lock on the primary current again and the measuring can resume when the primary current returns in the nominal range between $-I_{PN\,DC}$ and $+I_{PN\,DC}$. In overload mode, the secondary current generated is a low frequency triangle waveform between - 0.4 A and 0.4 A.

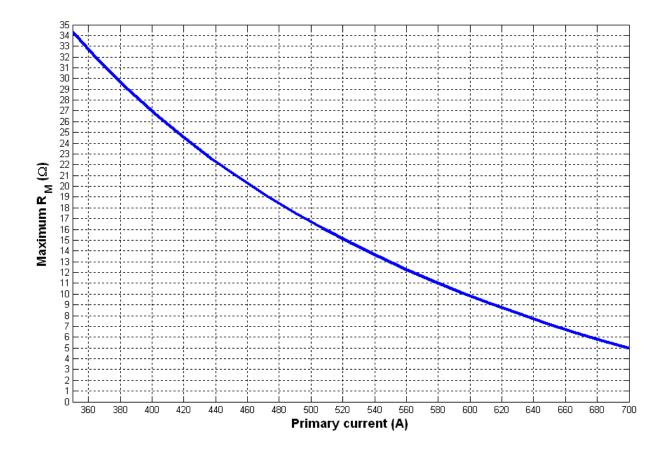

Under these conditions:

- The contact (normal operation status) between pin 3 and 8 (of the D-sub connector) switches off, this contact becomes open.
- The green LED indicator (normal operation status) turns off.

Max voltage pin 3 and pin 8, off-State 100 V Max current pin 3 and pin 8, on-State 1000 mA On-State resistance pin 3 and pin 8: 50 m Ω (typ)

TO ENSURE A SAFE RECOVERY FROM SATURATION, THE MAXIMUM BURDEN RESISTOR ALLOWED IS 2.5 Ω .

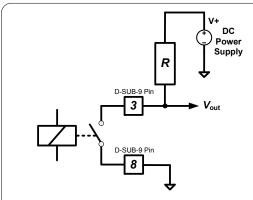

Maximum measuring resistor versus primary current

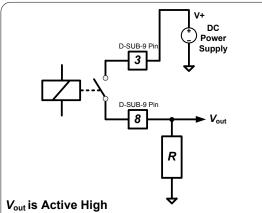

Status/Interlock port wiring

Example of application Status/Interlock port wiring

Vout is Active Low

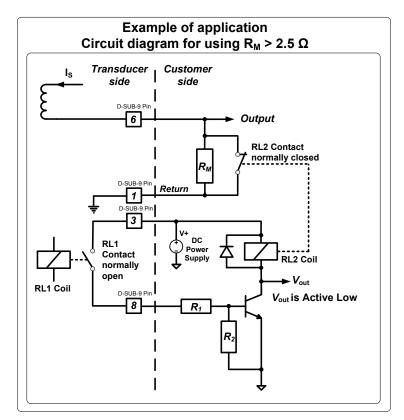

- ightarrow $extbf{V}_{ ext{out}}$ switches to GND when the transducer is OK (Normal operation).
- ightarrow V_{out} switches to V+ when the transducer is not OK (Overload mode or supply fault).

- ightarrow $extbf{V}_{out}$ switches to V+ when the transducer is OK (Normal operation).
- ightarrow V_{out} switches to GND when the transducer is not OK (Overload mode or supply fault).

Circuit diagram for using $R_{\rm M}$ > 2.5 Ω

This circuit ensures a safe recovery from saturation when using $R_{_{\rm M}}$ > 2.5 $\Omega.$ It allows the transducer to recover normal operation in case $R_{_{\rm M}}$ is greater than 2.5 Ω and an overload is detected by the transducer.

Contact RL1 (Pins 3 and 8)	Contact RL2	V _{out}	Description
Closed	Open	Low (switches to GND)	The transducer is OK (Normal operation)
Open	Closed	High (switches to V+)	The transducer is not OK (Overload mode or supply fault)

Safety

This transducer must be used in limited-energy secondary circuits according to IEC 61010-1.

This transducer must be used in electric/electronic equipment with respect to applicable standards and safety requirements in accordance with the manufacturer's operating instructions.

Caution, risk of electrical shock

When operating the transducer, certain parts of the module can carry hazardous voltage (eg. primary busbar, power supply). Ignoring this warning can lead to injury and/or cause serious damage.

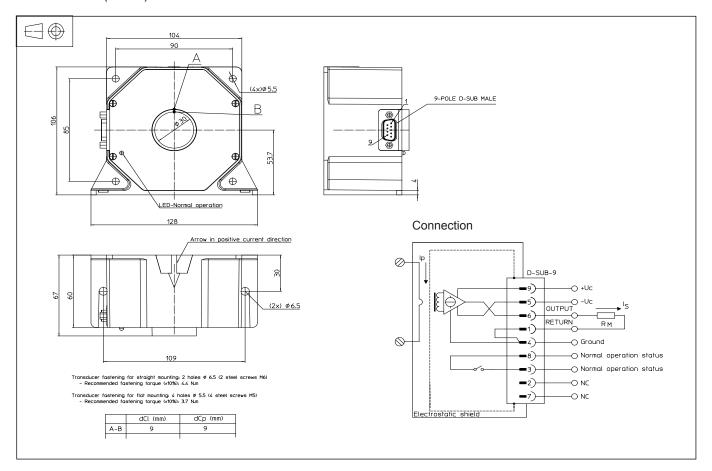

This transducer is a build-in device, whose conducting parts must be inaccessible after installation.

A protective housing or additional shield could be used.

Main supply must be able to be disconnected.

Dimensions (in mm)

Connection

• Normal operation status (Pins 3 and 8)

Normal operation means:

- \pm 15 V (\pm $U_{\rm C}$) present
- zero detector is working
- compensation current
- \leq 110 % of $I_{\rm PN\,DC}$
- green LED indicator is lit.

Contact (Pins 3 and 8)	Description
Closed	The transducer is OK (Normal operation)
Open	The transducer is not OK (Overload mode or supply fault)

Remarks

- $I_{\rm S}$ is positive when $I_{\rm P}$ flows in the direction of the arrow.
- We recommend that a shielded output cable and plug are used to ensure the maximum immunity against electrostatic fields.
- Pin 4 should be connected to cable and connector shield to maintain lowest output noise.
- Temperature of the primary conductor should not exceed 50 °C.

Mechanical characteristics

General tolerance ± 0.3 mm

Transducer fastening

- Straight mounting 2 holes Ø 6.5 mm

2 x M6 steel screws

Recommended fastening torque 4.4 Nm

- Flat mounting 4 holes Ø 5.5 mm

4 x M5 steel screws

Recommended fastening torque 3.7 Nm

• Connection of secondary on D-SUB-9,

connector UNC 4-40

• All mounting recommendations are given for a standard mounting. Screws with flat and spring washers.

• Primary through hole $\emptyset \le 30 \text{ mm}$

 Installation of the transducer must be done unless otherwise specified on the datasheet, according to LEM Transducer Generic Mounting Rules. Please refer to LEM document N°ANE120504 available on our Web site:

Products/Product Documentation.
